The learning journal is an engineering paper that gives the opportunity to students to elaborate about their experience and learned knowledge during the semester. The journal is submitted in two parts. Part one is due in week 6 and part two is due in week 12. Each part is worth 10%, the total weight is 20% towards the subject mark.

Submission

The journal part1 and part2 should be submitted to **Canavs/Assignments/Assessment 4/ Turnitin**. The journal file format should be either .PDF or .DOC. The journal files should be named as follows:

[student name]-[student ID]-[journal part 1 or 2].PDF or .doc

- Learning Journal part 1 is due in week 6.
- Learning Journal part 2 is due in week 12
- The length of each learning journal (part1 and part2) should be between 25-30 pages

Journal Guidelines

The journal (part1 and part 2) should follow the guidelines explained in the following design structure:

I- Weekly Logs (Lectures/Labs):

Elaborate in general about the items included in the journal. Brief overview of the weekly logs, the understanding of current technology used in the subject. The journal should include detailed logs of the students' experience, configurations, setups, exercises, and tables [commands, inputs, outputs, comments].

II- Reflection:

Elaborate thoroughly about your experience in the weeks for each part of the journal. Discuss in detail your leaning experience in the class (On-Campus or Online). Discuss in detail your opinion about the learning environment and your overall opinion about the teaching style. Discuss in detail the challenges your encountered and the problem-solving techniques and research your utilized to over the challenges presented by the subject and learning process. Discuss in detail the challenges that remained unsolved and outline what you could have done better to resolve these issues.

III- Referencing:

Provide a bibliography section using Harvard reference style. Ensure that the references used in your research to acquire the knowledge and skills are properly indexed and sorted by alphabetical order. Ensure that the references are properly cited in the Reflection section.

Journal Template

Provide the information (logs) in a logical order and a clear presentable structure using the following template (applies for Part1 and Part2):

Week #		
Start date:		
Topic:		
Lecture#		
	Lesson Learned:	<i>Briefly outline the lessons learned from the lecture</i>
	Tables:	<i>Add the setup and configuration you learned from the lecture in tables. Provide brief explanation to each configuration/command</i>
Lab#		
	Lesson Learned:	<i>Briefly outline the lessons learned from the lab</i>
	Tables:	<i>Add the setup and configuration you learned from the lab in tables. Provide brief explanation to each configuration, command, and setup.</i>
	Materials:	<i>Briefly outline and discuss the materials used in the lab (software, hardware)</i>
Reflection		
	Lecture Reflection:	<i>Briefly share your reflection about each lecture (experience, impression, challenges)</i>
	Lab Reflection:	<i>Briefly share your reflection about each lab (experience, impression, challenges)</i>
	Assessment Reflection:	<i>Briefly share your reflection about each assessment conducted within the bracket timeframe of the current journal.</i>
Bibliography		
	Reference List	<i>Provide a list of weekly references (websites, conference papers, journals, books) used in each week. The reference list should be arranged using Harvard style.</i>
	Citation	<i>Properly cite the references in the text (especially reflection and tables)</i>
