- Points 50
- Submitting a file upload
- Available after 20 Aug at 18:00

32548, Cybersecurity

Spring-2026

Assessment Task-4: Research Project, 10% of Total assessments

Assessment Type **Group Research Project, 32548 Cybersecurity Spring 2026**

Assessment Task No. 4

Assessment % 10%

Due date Week 12:
Submit by 11:59 pm on Sunday, 25 October 2026 via CANVAS

Assessment Description This assessment task involves conducting research in the cybersecurity domain. Students should research real-world problems and provide an in-depth review of their selected topic. This is a group task and is individually assessed based on each member's contribution to the project. Your report must mention the contribution of each member of your group. The assignment carries 10% of the total assessment tasks in your subject.

This is a group assignment with a **maximum of 4 members** in each group. You may choose to have fewer group members or even choose to do the assignment on your own. Discuss with your tutor. Each Group must submit their member information via email (Name, Email ID & Student ID) and their

selected topic on **28 August, 2026 to their assigned Tutor.** Your tutor, in consultation with the subject coordinator, will determine the final topic based on the relevance of the topic and a first-come, first-served basis. To avoid submitting the same topic selected by other groups, please check with your tutor, the topics that have already been approved by other Groups.

The research must include cybersecurity domains that can be integrated with one or more other domain(s), e.g., IoT, smart home, underwater communication, 5G/6G, AI, smart cities, vehicular network, logistics, health informatics, transport, mobile app, and website.

A few of the suggested topics include, but are not limited to:

1. IoT security and privacy: review, threats, solutions, and proposed framework.
2. Website security and privacy: review, threats, solutions, and proposed framework.
3. Web-based chatbots security and privacy: review, threats, solutions, and proposed framework.
4. Android-based app security and privacy: review, threats, solutions, and proposed framework.
5. IOS-based app security and privacy: review, threats, solutions, and proposed framework.
6. Security on the Internet of Medical Things applications (IoTM)/Health Informatics.
7. Compliance analysis of the privacy policies on the websites.
8. Compliance analysis of the privacy policies in mobile Apps.
9. Fintech Security or Payment Security
10. User Authentication or Access control.
11. Smart home-based attacks in the past 5 years: A comprehensive analysis
12. Blockchain technology for information security management
13. Adversarial Machine Learning and their use in mitigating cyber attacks
14. Threat Intelligence using AI technology
15. Use of responsible AI in cybersecurity
16. AI-powered misinformation
17. Emerging threats in specific AI
18. Rise of adversary AI and its implications
19. Security risk in AI enables industrial control system (ICS/operation technology) (OC system)
20. Security-sensitive components in AI deployment
21. Security risk in real-world AI applications
22. Challenges in AI model alignment, censorship, and ethical concerns.
23. Network Anomaly Detection
24. Malware Detection and Classification
25. Automated Penetration Testing
26. Cyber-Physical Systems Security
27. Deep-fake Detection and Attribution
28. Data Retention Policies and Compliance
29. Secure Data Sharing in Multi-cloud Environments
30. Data governance and cybersecurity risk management
31. Data standard security/privacy regulations
32. Cyberattacks on metaverse infrastructure
33. Quantum-Resistant Cryptography for Future Cybersecurity
34. Cybersecurity in Autonomous Vehicles

35. Zero Trust Architecture in Modern Enterprises

Students will get higher marks based on the depth of their research and the quality of their written reports. Students should submit their report (**between 4000 - 5000 words**), which may be structured as follows:

1. Abstract
2. Introduction
3. Literature Review
4. Topic discussion/findings/analysis/review/methodology
5. Open research challenges and future directions
6. Conclusion
7. References
8. Appendices (if any)

Your report should be submitted in PDF format. Students may use available tools for [LaTeX](https://www.latex-project.org/) , such as [overleaf](https://www.overleaf.com/) , [\(https://www.overleaf.com/\)](https://www.overleaf.com/).

Group function and student misconduct/plagiarism information:

This is a group assignment; students will be assessed as a team, which means each group member will normally receive the same mark. If you have trouble with the operation of your group, ask your tutor first for advice (preferably ask as a group). If you feel that other member/s are not contributing to the project, the subject coordinator should be informed, and a group meeting will be held to produce a solution. In extreme cases, a group member may be asked by the subject coordinator to withdraw from the Subject, do extra work, or accept a lower mark. No complaints about group operation will be considered after the assignment has been handed in. **Late assignments will be deducted one mark per day late.** Assignments that are **more than seven days will receive zero.** Special consideration for late submission must be arranged beforehand with the Subject Coordinator. Feedback on the report will be given to the students three weeks after the due date.

Assignments in this Subject should be your own original work. The inclusion in assessable work of any material such as code, graphics, or essay text obtained from other persons or sources without citation of the source is plagiarism and is a breach of University Rule 16.2.2. **Also, the use of Generative AI tools such as Chat GPT is not allowed to write your report.** Any collaboration with another person should be limited to those described in the "Acceptable Behaviour" section of the Statement of Academic Integrity. Similarly, any group work should be the result of collaboration only within the group. Any infringement by a student will be considered a breach of discipline and will be dealt with in accordance with the Rules and By-Laws of the University. Students are not to give to or receive from any other person copies of their assessable work in any form (hard copy or an electronic file). To do so is 'academic misconduct' and is a breach of University Rule 16.2.2. That is, assisting other students to cheat or act dishonestly in a submitted assignment. Accidental submission of another student's work as your own is a breach of University Rule 16.2.2 in that you are acting dishonestly since you should not have a copy of another student's work. **The Faculty penalty for proven and serial misconduct of this nature is zero marks for the Subject.**

- The assessment must be submitted through UTS CANVAS.

- Turnitin is plagiarism software, which will generate similarities in your report and identify if you have copied information and included it in your assessment.
- Similarity less than 10% is mostly accepted without penalty. Similarly, more than 10% and less than 20% will incur a penalty of 10%. The similarity between 20% and 30% will incur a penalty of 20% and a similarity above 30% will incur a penalty of 100%.
- To avoid being charged with Misconduct, students need to submit their own work and apply [APA or Harvard Style Referencing](https://courses.highered.tafensw.edu.au/mod/page/view.php?id=48) [↗\(https://courses.highered.tafensw.edu.au/mod/page/view.php?id=48\)](https://courses.highered.tafensw.edu.au/mod/page/view.php?id=48).

Late Submission:

- Any submission past the specified due date will be classified as late.
- **Any Late submission will be subject to a reduction of the mark allocated for the assessment item by 1 mark per day (or part thereof) of the total marks available for the assessment item. A 'day' for this purpose is defined as any day of the week including weekends.**
- Assignments submitted later than one (1) week after the due date will not be accepted unless special consideration is approved as per the formal process.

Special Consideration:

- Students whose ability to submit or attend an assessment item is affected by sickness, misadventure, or other circumstances beyond their control may be eligible for special consideration. No consideration is given when the condition or event is unrelated to the student's performance in a component of the assessment, or when it is considered not to be serious.
- Students applying for special consideration must submit the form within 3 days of the due date of the assessment.

Marking Criteria for the Assignment

The section needs to be included in the report

Description of the section

Marks

Abstract	Abstract of the research report	5
Introduction	The 'what, why, who and how' of the research title.	5
Literature review	The detailed investigation of previous work done is relevant to the field of study.	10
Analysis, discussion, findings.	A comparative analysis of the findings, its discussion, and proposal.	10

Challenges and future directions	What are the challenges and future possible directions to resolve these challenges?	10
Conclusions	Write a clear conclusion for the report	5
Reference style	Follow Harvard style referencing	5
Total		50

Marking rubric for the assignment

Grades	Excellent	Very Good	Good	Satisfactory	Unsatisfactory
	85-100	75-84	65-74	50-64	0-49
Abstract	Concise and specific to the project	Topics are relevant and soundly analyzed	Generally relevant and analyzed	Some relevance and briefly presented	This is not relevant to the assignment topic
Introduction	Concise and specific to the project	Topics are relevant and soundly analyzed	Generally relevant and analyzed	Some relevance and briefly presented	This is not relevant to the assignment topic
Literature review	Concise and specific to the project	Topics are relevant and soundly analyzed	Generally relevant and analyzed	Some relevance and briefly presented	This is not relevant to the assignment topic
Analysis, discussion, findings.	Demonstrated excellent ability to analyze and discussed the findings	Demonstrated excellent ability to think critically but did not source reference materials appropriately	Demonstrated ability to think critically and source reference materials appropriately	Demonstrated ability to think critically but did not source reference materials appropriately	Did not demonstrate properly and did not source reference materials appropriately

Challenges and future directions	Excellent and convincing	Good and convincing	Fairly written and slightly convincing	The section is poorly written	Not demonstrated enough
Conclusions	The conclusion is very well written	The conclusion is presented with good cohesion	The conclusion is fairly presented	Conclusion is poor	No conclusion presented
Reference style	All references are properly mentioned and cited	References are mentioned and cited	A fair number of references are properly mentioned	Poor referencing and citation	No references and citations
